Summary

During my career as a Software Developer, I immersed myself in the world of archiving and data entry, where I worked for two years at a company called Domino ICT in Gaza. Initially, my work was limited to programming and developing websites, but over time, after about 6 months, my manager began to rely on me for data entry alongside programming, as there were not many employees and he did not have enough budget to hire someone else. From here, my journey in this world began, where I worked for a year and a half. My work included entering real data into the websites and applications of clients that we developed, such as e-commerce applications (pharmacy, clothing store, supermarket). I dealt with scanners and used OCR technology to process text in images. My work also included archiving all the company's projects and advertising campaigns in Excel files and folders in an organized, indexed, and logically structured way.

Education

09/2019 – 06/2023	Bachelor's degree in Software Development
Gaza, Palestine	Islamic University of Gaza
	Graduated with 86% GPA

09/2018 – 07/2019	High School Certificate in Scientific Branch
Gaza, Palestine	Al-Taqwa School
	GPA of 90.4%

Certificates

Amideast Certificate of Completion

I completed levels four, five, and six with a 95% GPA in 2018, totaling 120 hours, with an average of 30 to 45 hours per level.

Work Experience

02/2021 – 02/2023

Gaza, Palestine

Domino ICT (On Site)

Data Entry and Archiver & Frontend Developer

I completed a three-month internship and was then hired as a Frontend Web Developer for another three months. I worked on developing a website to manage gas cylinders in the company's warehouses. I also developed a chat application called Vela, similar to WhatsApp, using React.js. During this time, my manager began relying on me to organize and archive data in MS Excel, CRM, CMS, and GitHub, while continuously backing it up to a secure cloud. This included:

- Actual raw data collected directly from clients and integrated into their websites and applications that we developed.
- Archiving all company projects and advertising campaigns in Excel files and folders, organized systematically and logically based on a branching structure.
- Installing articles and media on news websites through the site's control panel (CMS).
- Entering data for current and potential clients into the Customer Relationship Management (CRM) system, such as project start date, client contact person, phone numbers, email addresses, etc.

Egypt

Makla for IT (Remote)

Frontend Developer

- (I have a contract for this work)
- I built the front-end interfaces for an Enterprise Resource Planning (ERP) system, which included several sections: Property Management (containing essential property data such as property name, property number, detailed address, geographic coordinates on a map, property type, etc.), Company Management (company name, company type, commercial registration number, etc.), Employee Management, and Positions and Permissions. I tested all these fields and entered data into them without exception to ensure accuracy and corrected any existing issues.
- Collaborated closely with backend developers to integrate well-structured REST APIs and ensure seamless data flow.

- Worked with UI/UX designers to implement responsive, user-friendly, and accessible interfaces.
- I wrote clean, optimized, and maintainable code under the supervision of an experienced team leader.
- Ensured security best practices and data protection across the application stack.

Skills

Hard Skills

- Proficiency in Microsoft Office (MS Office), especially Excel and Word
- Fast and accurate data entry
- Management and archiving of electronic documents
- Cloud storage experience
- Digital transformation and scanning
- Data security and confidentiality
- Data cleansing and auditing

Soft Skills

- Problem-solving
- Accuracy and keen observation
- High level of organization and orderliness
- Communication and teamwork skills
- Time management and punctuality

Frontend Developing Skills

- HTML, CSS, JavaScript
- React.js
- Next.js
- TailwindCSS, Material UI
- TypeScript
- Redux Toolkit
- RESTful APIs
